

Form #: SDS 853027 Revised: AG Supersedes: AF ECO #: 1002195

Chemical Family/Classification:

Sealed Lead Battery

I. PRODUCT IDENTIFICATION
Chemical Trade Name (as used on label):

Cyclon®, Odyssey, Genesis®, SBS, XE®, Armsafe Plus®, MILPC, Nexsys, or Large TPPL.

Canada Corporate Office

3-61 Parr Boulevard

Bolton, Ontario

Synonyms:

Sealed Lead Acid Battery, VRLA Battery

EnerSys Energy Products Inc.

Warrensburg, MO 64093-9301

617 N. Ridgeview Drive

Manufacturer's Name/Address:

Telephone:

For information and emergencies, contact EnerSys Energy Products Environmental, Health & Safety Dept. at 660-429-2165

24-Hour Emergency Response Contact:

ESY12NXS157

CHEMTREC DOMESTIC: 800-424-9300 CHEMTREC INTL: 703-527-3877

	tion of lead dust or fumes m	hay cause irritation of up	per respiratory tract and	i iungs.		
Lead Compounds: Acute	e severe irritation of mouth, ingestion may cause abdom			e cramping. This may	lead rapidly to systemic	
toxicity and must be treate	ed by a physician.					
Skin Contact: Sulfuric Acid: Severe irri	tation, burns and ulceration					
Lead Compounds: Not ab	osorbed through the skin.					
Eye Contact:						

ontact: <u>Sulfuric Acid:</u> Severe irritation , burns, cornea damage, and blindness.

Lead Components: May cause eye irritation Effects of Overexposure - Acute: Sulfuric Acid: Severe skin irritation, damage to cornea, upper respiratory irritation. Lead Compounds: Symptoms of toxicity include headache, fatigue, abdominal pain, loss of appetite, muscle aches and weakness, sleep disturbances and irritability. **Effects of Overexposure - Chronic:** Sulfuric Acid: Possible erosion of tooth enamel, inflammation of nose, throat and bronchial tubes. Lead Compounds: Anemia; neuropathy, particularly of the motor nerves, with wrist drop; kidney damage; reproductive changes in males and females. Repeated exposure to lead and lead compounds in the workplace may result in nervous system toxicity. Some toxicologists report abnormal conduction velocities in persons with blood lead levels of 50mcg/100 ml or higher. Heavy lead exposure may result in central nervous system damage, encephalopathy and damage to the blood-forming (hematopoietic) tissues. Carcinogenicity: Sulfuric Acid: The International Agency for Research on Cancer (IARC) has classified "strong inorganic acid mist containing sulfuric acid" as a Group 1 carcinogen, a substance that is carcinogenic to humans. This classification does not apply to liquid forms of sulfuric acid or sulfuric acid solutions contained within a battery. Inorganic acid mist (sulfuric acid mist) is not generated under normal use of this product. Misuse of the product, such as overcharging, may result in the generation of sulfuric acid mist. Lead Compounds: Lead is listed as a Group 2A carcinogen, likely in animals at extreme doses. Per the guidance found in OSHA 29 CFR 1910.1200 Appendix F, this is approximately equivalent to GHS Category 1B. Proof of carcinogenicity in humans is lacking at present Medical Conditions Generally Aggravated by Exposure: Overexposure to sulfuric acid mist may cause lung damage and aggravate pulmonary conditions. Contact of sulfuric acid with skin may aggravate diseases such as eczema and contact dermatitis. Lead and its compounds can aggravate some forms of kidney, liver and neurologic diseases. Acute Toxicity: Inhalation LD50: Electrolyte: LC50 rat: 375 mg/m3; LC50: guinea pig: 510 mg/m3 Elemental Lead: Acute Toxicity Point Estimate = 4500 ppmV (based on lead bullion) Oral LD50: Electrolyte: rat: 2140 mg/kg Elemental Lead: Acute Toxicity Estimate (ATE) = 500 mg/kg body weight (based on lead bullion) Additional Health Data: All heavy metals, including the hazardous ingredients in this product, are taken into the body primarily by inhalation and ingestion. Most inhalation problems can be avoided by adequate precautions such as ventilation and respiratory protection covered in Section 8. Follow good personal hygiene to avoid inhalation and ingestion: wash hands, face, neck and arms thoroughly before eating, smoking or leaving the worksite. Keep contaminated clothing out of non-contaminated areas, or wear cover clothing when in such areas. Restrict the use and presence of food, tobacco and cosmetics to non-contaminated areas. Work clothes and work equipment used in contaminated areas must remain in designated areas and never taken home or laundered with personal non-contaminated clothing. This product is intended for industrial use only and should be isolated from children and their environment The 19th Amendment to EC Directive 67/548/EEC classified lead compounds, but not lead in metal form, as possibly toxic to reproduction. Risk phrase 61: May cause harm to the unborn child, applies to lead compounds, especially soluble forms. XII. ECOLOGICAL INFORMATION Environmental Fate: Lead is very persistent in soil and sediments. No data on environmental degradation. Mobility of metallic lead between ecological compartments is slow. Bioaccumulation of lead occurs in aquatic and terrestrial animals and plants but little bioaccumulation occurs through the food chain. Most studies include lead compounds and not elemental lead. Environmental Toxicity: Aquatic Toxicity: Sulfuric acid: 24-hr LC50, freshwater fish (Brachydanio rerio): 82 mg/L 96 hr- LOEC, freshwater fish (Cyprinus carpio): 22 mg/L 48 hr LC50 (modeled for aquatic invertebrates): <1 mg/L, based on lead bullion Lead: Additional Information: · No known effects on stratospheric ozone depletion. · Volatile organic compounds: 0% (by Volume) · Water Endangering Class (WGK): NA XIII. DISPOSAL CONSIDERATIONS (UNITED STATES) Spent batteries: Send to secondary lead smelter for recycling. Spent lead-acid batteries are not regulated as hazardous waste when the requirements of 40 CFR Section 266.80 are met. This should be managed in accordance with approved local, state and federal requirements. Consult state environmental agency and/or federal EPA. **Electrolyte:** Place neutralized slurry into sealed containers and handle as applicable with state and federal regulations. Large water-diluted spills, after neutralization and testing, should be managed in accordance with approved local, state and federal requirements. Consult state environmental agency and/or federal EPA. Following local, State/Provincial, and Federal/National regulations applicable to end-of-life characteristics will be the responsibility of the end-user. XIV. TRANSPORT INFORMATION U.S. DOT: Excepted from the hazardous materials regulations (HMR) because the batteries meet the requirements of 49 CFR 173.159(f) and 49 CFR 173.159a of the U.S. Department of Transportation's HMR. Battery and outer package must be marked "NONSPILLABLE" or "NONSPILLABLE BATTERY"

EnerSys supports	preventative actions concerning ozone depletion in the atmosphere due to emissions of CFC's and other ozone depleting	
chemicals (ODC'	s), defined by the USEPA as Class I substances. Pursuant to Section 611of the Clean Air Act Amendments (CAAA)	
of 1990, finalized	on January 19, 1993, EnerSys established a policy to eliminate the use of Class I ODC's prior to the May 15, 1993 deadline.	
STATE REGULATIONS (US):	
Proposition 65:		
Warning: Battery	y posts, terminals and related accessories contain lead and lead compounds, chemicals known to the State of California to cause	
cancer and reproc	ductive harm. Batteries also contain other chemicals known to the State of California to cause cancer. Wash hands after handling.	
INTERNATIONAL REGULA	ATIONS:	
Distribution into	Quebec to follow Canadian Controlled Product Regulations (CPR) 24(1) and 24(2).	
Distribution into	the EU to follow applicable Directives to the Use, Import/Export of the product as-sold.	
l		
Article 33 (1) of t	the REACH regulation (Reg. EC 1907/2006), which entered into force on 1 st of June 2007 in the European Union, requires that	
manufacturers co	mmunicate the presence of Substances of Very High Concern (SVHC) in articles (lead batteries) in concentration greater than 0.1% by	
weight.		
Effective the 27 th	of June 2018, the European Chemical Agency (ECHA) updated the Candidate List with the inclusion of Lead Metal	
(CAS No.: 7439-	92-1). This inclusion of Lead as an SVHC applies to all of EnerSys Lead based battery products regardless of the design	
(Flooded, Gel, AG	GM, etc).
