### **SECTION 11:** TOXICOLOGICAL INFORMATION

ACUTE TOXICITY (test results basis & comments)				
Sulfuric acid	LD <sub>50</sub> , Rat: 21409 mg/kg			
	LC <sub>50</sub> , Guinea pig: 510 mg/m³			
Lead	Repeated exposure to lead and lead compounds in the workplace may result in nervous system toxicity. Some			
	toxicologists report that abnormal conduction velocities in person with blood lead levels of 50 µg/100 ml or higher.			
	Heavy lead exposure may result in central nervous system damage, encephalopathy and damage to the blood-			
	forming (hematopoietic) tissues.			
Additional information	Very little chronic toxicity data available for elemental lead. Lead is listed by IARC as a 2B carcinogen: possible			
	carcinogen in humans. Arsenic is listed by IARC, ACGIH, and NTP as a carcinogen, based on studies with high			
	doses over long periods of time. The other ingredients in this product, present at equal to or greater than 0.1% of			
	the product, are not listed by OSHA, NTP, or IARC as suspect carcinogens. The 19th Amendment to EC Directive			
	67/548/EEC classified lead compounds, but not lead in metal form, as possibly toxic to reproduction. Risk phrase			
	61: May cause harm to the unborn child, applies to lead compounds, especially soluble forms.

Persistence & degradability	Lead is very persistent in soils / sediments. No data available on biodegradation.		
Bio-accumulative potential (inc.	Mobility of metallic lead between ecological compartments is low. Bioaccumulation of lead occurs in aquatic and		
mobility)	terrestrial animals and plants, but very little bioaccumulation occurs through the food chain. Most studies have		
	included lead compounds, not solid inorganic lead.
